NOTES:

More recognized than any other vessel in space, the Constitution class of starship ushered in a new era of exploration and expansion for the Federation that has not been rivaled before or since. The Constitution class became the focal point for the Federations scientific research into the many phenomenon's in the universe as well as a potent tool for political and defensive measures required by the expanding Federation. No other vessel before or since captured the imagination like the Constitution.

Surprisingly, only 13 of these ships were originally built. Using the latest in computer technology, heavy laser weaponry and shield technology, nothing in the Romulan or Klingon inventory could even come close to the Mk I Constitution. The Mk I incorporated a newly designed computer system, created by Daystrom labs, that would later be known as the M-3. This complex computer control system provided excellent data storage, power control and weapon control never before seen on a starship. The new M-3 allowed the installation of 6 independent laser banks. These unique weapons were placed side by side at three different points around the large primary hull. 2 were mounted forward under the primary hull. Although the emitters were mounted close together, each could fire independently or together to provide heavier firepower when necessary. Also mounted were two heavy accelerator cannons. Although bulky, the FAC-3's could provide much needed firepower. The extreme initial costs in resources and manpower prevented massive fleets of Constitution's from being launched, and the time of the 4-Years War, the Constitution was thought of as a dangerous assignment. By early 2256, the Constitution was upgraded, incorporating completely revolutionary and new systems, including a larger computer, and the new Phaser and Photo Torpedo technology. With a new, more powerful warp drive, these new systems made the Constitution the envy of every major government, and before the end of the 4-Years War, the remaining Constitution class ships were pulled off the front line.

The Mk II's power and reputation quickly created a run on Heavy Cruiser designs. The Bonhomme Richard class was a direct descendant of the powerful Constitution, as were later Endeavor and Achenar classes. The Mk II retained the single hull mounting of the twin phaser banks and installed the new Photon torpedo system. The Mk II's would log more contact with strange and new worlds, that they would go down in history as the most well designed ships in the fleet. The crew of the Mk II was nearly doubled, adding massive science capability and a much larger engineering base to the ships admirable characteristics. The Mk III would become the most noteworthy upgrade to the Constitution class, at it saw the exploits of one of the most successful ships ever, the USS Enterprise. With her exploits already legendary under the command of Christopher Pike, the Mk III Enterprise would remain an unparalleled legend under the command of James T. Kirk, surviving more hostile encounters than any other ship.

Although the Constitution created greater interest in space exploration than any other ship, their dangerous missions were still remembered mainly as adventures. No less than 10 other ships designs can trace a direct lineage to the Constitution class.
